

## Models & Tables Changes

OLD

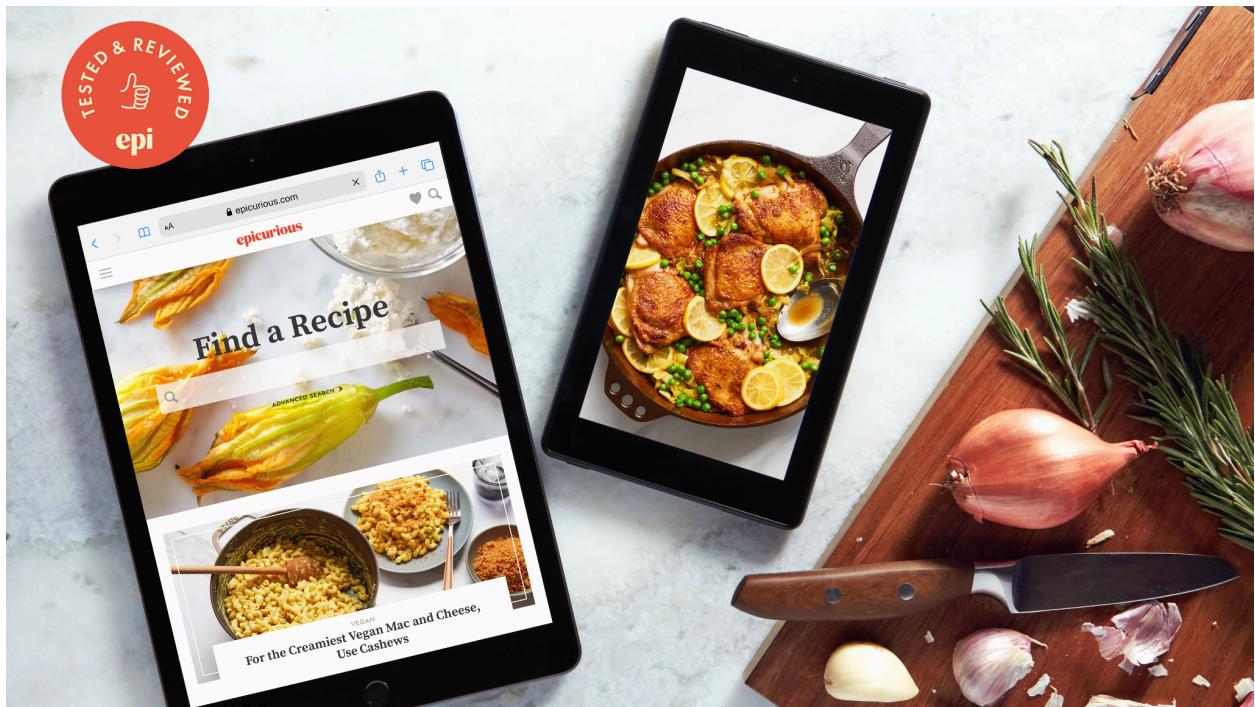

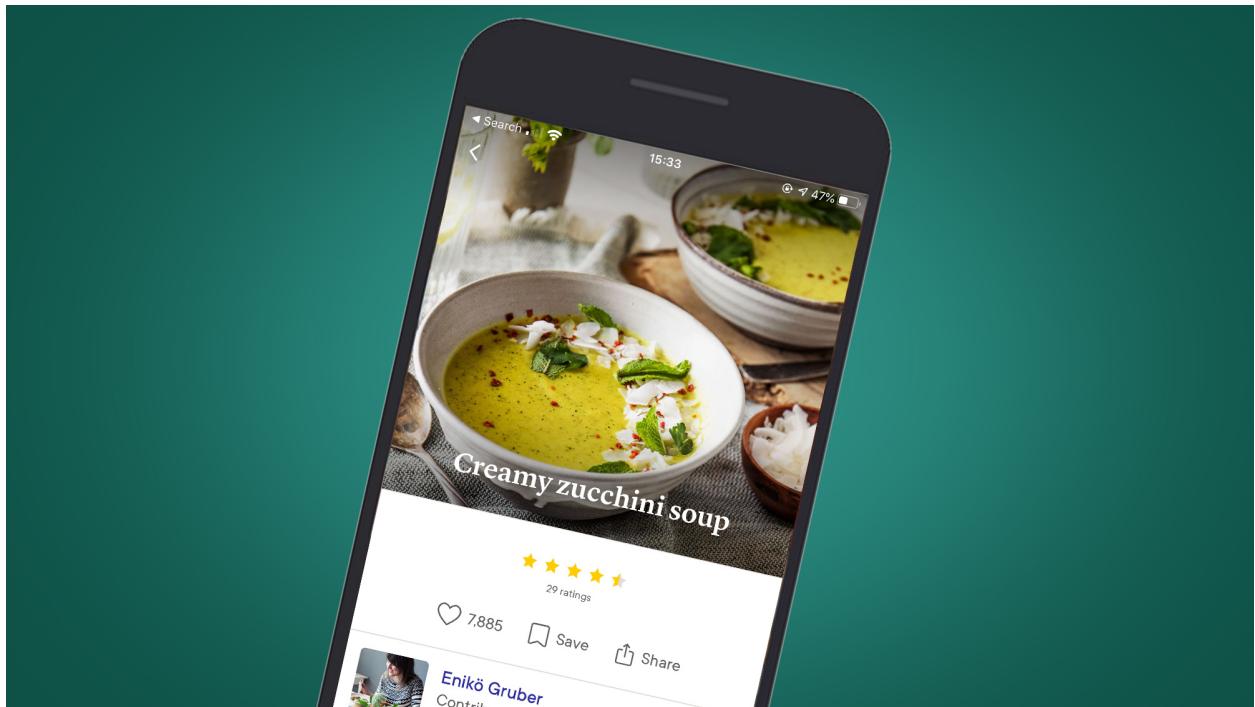

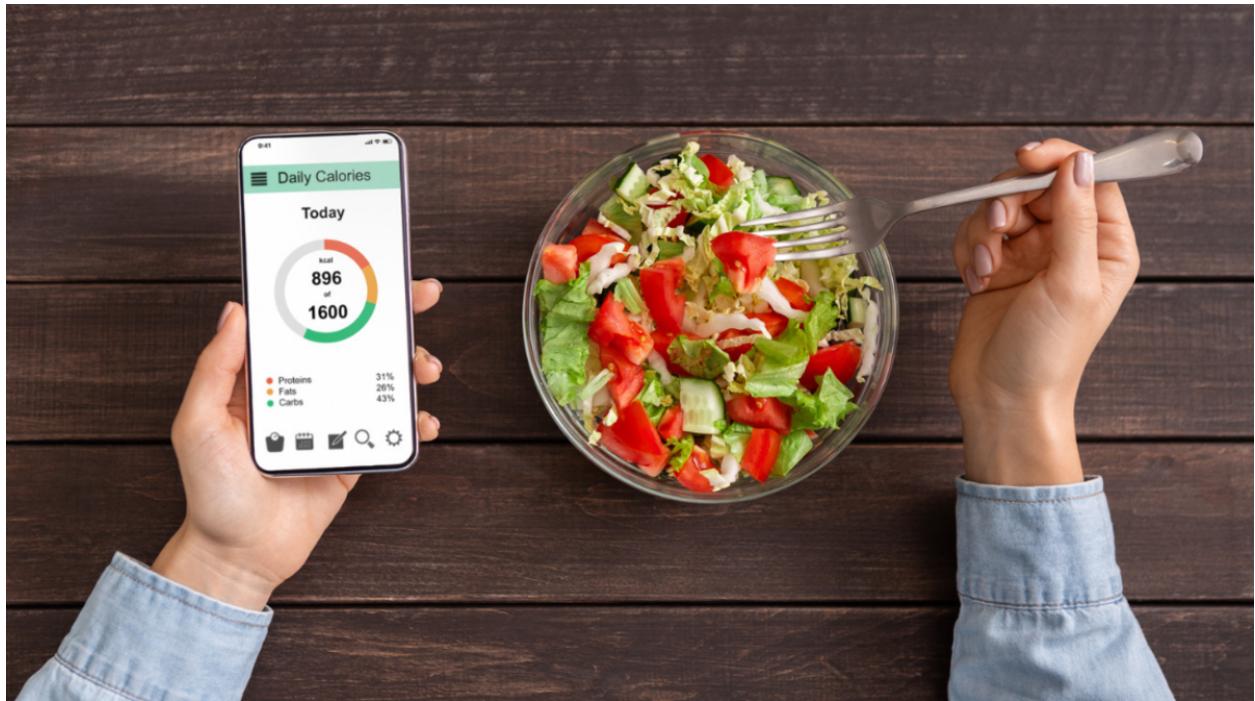

NEW

Based on feedback from my mentor, I have removed the log-in app from schema and moved the password to Users. I have also added a description attribute and Meal Type choice to Recipes and will add the logic for the picture attribute to app.

Frontend Inspirations:

I like the idea of the wooden table for my welcome screen. Splashes of green throughout the app, green is a healthy food colour, so want to incorporate this into my list view and detail view
